Groundwater Chromium Sampling Results for GMP Wells, 2001 through Current Quarter Second Quarter 2021 Groundwater Monitoring Report and Domestic Well Sampling Results Site-wide Groundwater Monitoring Program Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Notes:

Results that are bolded are detected concentrations without J qualifier.
All concentrations in micrograms per liter (µg/L)

- ^a PG&E believes all Fourth Quarter 2014 and First Quarter 2015 chromium concentrations in the MW-196 well cluster reflect local groundwater conditions and are not related to the chromium plume. Discussions regarding these results were presented in the January 30, 2015 Evaluation of Fourth Quarter 2014 Chromium Results for the MW-196 Monitoring Well Cluster and the April 30, 2015 Evaluation of First Quarter 2015 Chromium Results for the MW-196 Monitoring Well Cluster.
- ^b Samples were collected after isolating deep screen of extraction well with a packer.
- ^c Samples were collected after isolating shallow screen of extraction well with a packer.
- ^d Sample collected prior to operation of extraction well pump, therefore results are not considered representative of the groundwater within the well.

Abbreviations:

* = Results shown are for a duplicate sample taken on this date.

µg/L = micrograms per liter

Alisto = Alisto Engineering Group

Arcadis = Arcadis U.S., Inc.

CH2M = CH2M HILL, Inc.

GMP = Groundwater Monitoring Program

J = Analyte was present in the sample but the laboratory reported concentration is qualified as estimated by data validation because one or more quality control criteria were not met.

NA = Sample was not analyzed using this method.

ND (x.x) = Parameter is not detected at the reporting limit shown.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (3.2 ug/L) and hexavalent chromium (2.2 ug/L) for sample N044844-002 (MW-157S-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (6.1 ug/L) and hexavalent chromium (4.1 ug/L) for sample N044844-005 (MW-220S-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (5.4 ug/L) and hexavalent chromium (3.5 ug/L) for sample N044844-006 (MW-922-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (3.4 ug/L) and hexavalent chromium (2.3 ug/L) for sample N044844-009 (MW-128S2-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (4.5 ug/L) and hexavalent chromium (2.0 ug/L) for sample N044844-013 (MW-916-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

CASE NARRATIVE

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (3.2 ug/L) and hexavalent chromium (2.2 ug/L) for sample N044844-002 (MW-157S-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.0 and 2.5 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (6.1 ug/L) and hexavalent chromium (4.1 ug/L) for sample N044844-005 (MW-220S-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 6.0 and 4.8 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (5.4 ug/L) and hexavalent chromium (3.5 ug/L) for sample N044844-006 (MW-922-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 5.6 and 4.6 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (3.4 ug/L) and hexavalent chromium (2.3 ug/L) for sample N044844-009 (MW-128S2-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.5 and 2.5 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (4.5 ug/L) and hexavalent chromium (2.0 ug/L) for sample N044844-013 (MW-916-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 4.6 and 2.1 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (1.5 ug/L) and hexavalent chromium (0.50 ug/L) for sample N044845-003 (MW-67B-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries biased high for Orthophosphate, Dissolved (as P) in QC samples N044845-001BMS and N044845-001BMSD. Samples were none-detect (ND) for this analyte therefore, reanalysis of the samples was not necessary. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (1.5 ug/L) and hexavalent chromium (0.50 ug/L) for sample N044845-003 (MW-67B-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 1.6 and 1.1 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (4.0 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044846-002 (MW-105S-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (3.9 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044846-003 (MW-908-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (4.0 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044846-002 (MW-105S-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 4.0 and 3.7 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (3.9 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044846-003 (MW-908-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (1.6 ug/L) and hexavalent chromium (0.77 ug/L) for sample N044862-001 (36-26-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (1.6 ug/L) and hexavalent chromium (0.77 ug/L) for sample N044862-001 (36-26-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 1.6 and 1.5 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 200.8_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N044888-008EMS, N044888-008EMSD, N044888-009CMS, N044888-009CMSD, N044890-008EMS and N044890-008EMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (3.1 ug/L) and hexavalent chromium (1.1 ug/L) for sample N044887-011 (EX-03-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (3.1 ug/L) and hexavalent chromium (1.1 ug/L) for sample N044887-011 (EX-03-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.0 and 2.5 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 200.8_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N044888-008EMS, N044888-008EMSD, N044888-009CMS, N044888-009CMSD, N044890-008EMS and N044890-008EMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (3.3 ug/L) and hexavalent chromium (2.1 ug/L) for sample N044888-004 (MW-124S1-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (2.5 ug/L) and hexavalent chromium (1.7 ug/L) for sample N044888-006 (MW-124S2-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (1.5 ug/L) and hexavalent chromium (0.51 ug/L) for sample N044888-012 (MW-45A-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

CLIENT: ARCADIS U.S., Inc. - California
Project: PG&E Hinkley - GMP, 30046045
Lab Order: N044888

CASE NARRATIVE

Because the results for total dissolved chromium (4.0 ug/L) and hexavalent chromium (2.3 ug/L) for sample N044888-019 (MW-90C-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (3.3 ug/L) and hexavalent chromium (2.1 ug/L) for sample N044888-004 (MW-124S1-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.3 and 2.2 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (2.5 ug/L) and hexavalent chromium (1.7 ug/L) for sample N044888-006 (MW-124S2-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.7 and 1.8 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (1.5 ug/L) and hexavalent chromium (0.51 ug/L) for sample N044888-012 (MW-45A-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 1.3 and 0.86 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (4.0 ug/L) and hexavalent chromium (2.3 ug/L) for sample N044888-019 (MW-90C-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.8 and 2.8 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (1.9 ug/L) and hexavalent chromium (0 ug/L) for sample N044889-004 (28-36-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (1.9 ug/L) and hexavalent chromium (0 ug/L) for sample N044889-004 (28-36-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 1.8 and 1.8 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 200.8_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N044888-008EMS, N044888-008EMSD, N044888-009CMS, N044888-009CMSD, N044890-008EMS and N044890-008EMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 200.8_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N044903-003EMS, N044903-003EMSD, N044903-012EMS and N044903-012EMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (3.3 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044901-013 (MW-172S1-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (1.8 ug/L) and hexavalent chromium (1.1 ug/L) for sample N044901-015 (MW-117S1-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (2.7 ug/L) and hexavalent chromium (1.5 ug/L) for sample N044901-018 (MW-126S2-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

sample N044901-019 (MW-920-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (3.3 ug/L) and hexavalent chromium (2.5 ug/L) for sample N044901-013 (MW-172S1-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 3.4 and 2.6 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (1.8 ug/L) and hexavalent chromium (1.1 ug/L) for sample N044901-015 (MW-117S1-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.0 and 1.3 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (2.7 ug/L) and hexavalent chromium (1.5 ug/L) for sample N044901-018 (MW-126S2-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.7 and 1.7 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (2.7 ug/L) and hexavalent chromium (1.5 ug/L) for sample N044901-019 (MW-920-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.6 and 1.7 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

CASE NARRATIVE**SAMPLE RECEIVING/GENERAL COMMENTS:**

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg, PA.

Analytical Comments for EPA 200.8_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N044903-003EMS, N044903-003EMSD, N044903-012EMS and N044903-012EMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (4.8 ug/L) and hexavalent chromium (3.3 ug/L) for sample N044903-010 (MW-127S1-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (2.6 ug/L) and hexavalent chromium (1.6 ug/L) for sample N044903-011 (MW-127S2-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Because the results for total dissolved chromium (33 ug/L) and hexavalent chromium (1.7 ug/L) for sample N044903-017 (EX-24-Q221) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

CASE NARRATIVE

Analytical Comments for EPA 6010B_Dissolved:

Matrix Spike (MS) is outside recovery criteria for Iron in QC sample N044903-015D-MS possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

RPD for Matrix Spike (MS) and Matrix Spike Duplicate (MSD) is outside criteria; however, the associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (4.8 ug/L) and hexavalent chromium (3.3 ug/L) for sample N044903-010 (MW-127S1-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 4.5 and 3.1 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (2.6 ug/L) and hexavalent chromium (1.6 ug/L) for sample N044903-011 (MW-127S2-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.5 and 1.8 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Because the results for total dissolved chromium (33 ug/L) and hexavalent chromium (1.7 ug/L) for sample N044903-017 (EX-24-Q221) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 26 and 3.0 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.
